Sample Case Study : Literature Review

Sample Case Study : Literature Review

Objective: A U.S. based medtech company wanted to evaluate a major Cardiovascular disease space, previously unexplored by the company, and understand the advances made by various technologies and companies in the space

Approach:

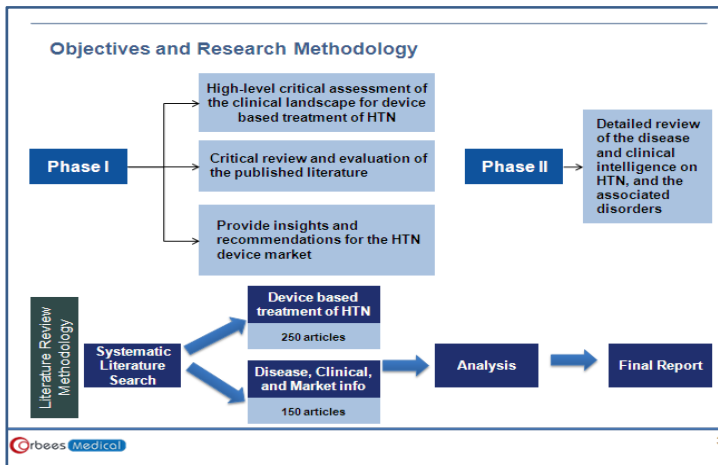

- Orbees Medical conducted a systematic Literature review of all the clinical trials, observational studies, feasibility studies, longitudinal studies, and other studies which have been published so far for the device based treatment of the disease
- Analyzed the evolution of the treatment paradigm of the disease space and potential of new treatment options
- Explained the mechanism of action of various devices currently used for the treatment of disease and other potential MOA or sites which can be targeted for treatment of the disease
- Explored various other technologies currently used for treatment of other ailments but have the potential for the treatment of the disease

Impact:

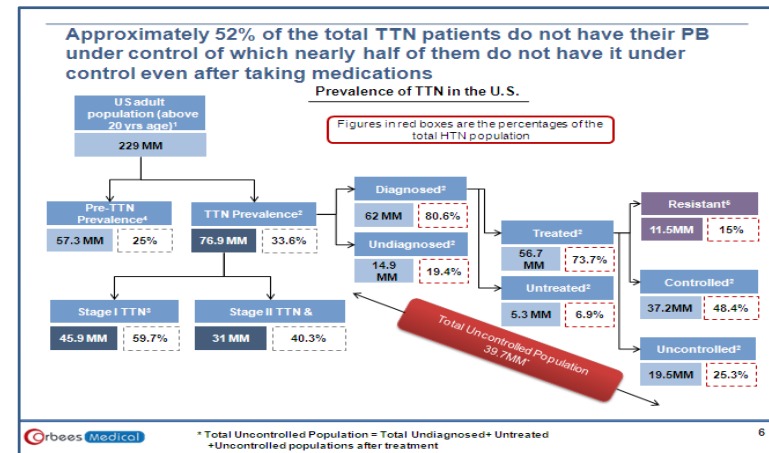

- Enabled the client to understand the device based landscape of the disease space and enable them to take evidence based approach in making decisions on matters pertaining to the space.

Sample Deliverables

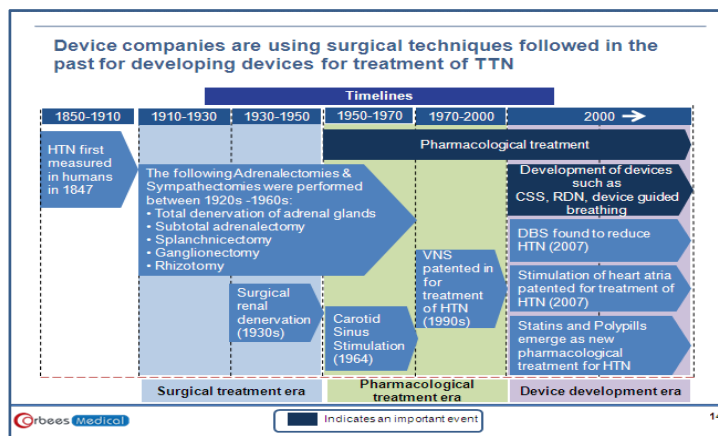

Methodology used for performing systematic literature review

Break-up and categorization of target patient population in the U.S.

Historical map of various technological advances made in the disease space

Evaluation of two companies based on various success parameters
