Sample Case Study : Multi-level Portfolio Analysis

Sample Case Study : Multi-level Portfolio Analysis

Problem Statement

- One of our clients had an IP portfolio characterized by patents pertaining to varied technologies and applications
- They wanted to acquire a deep understanding of their IP portfolio and extract valuable insights from it so that they could navigate their IP portfolio desirably

Orbees Approach

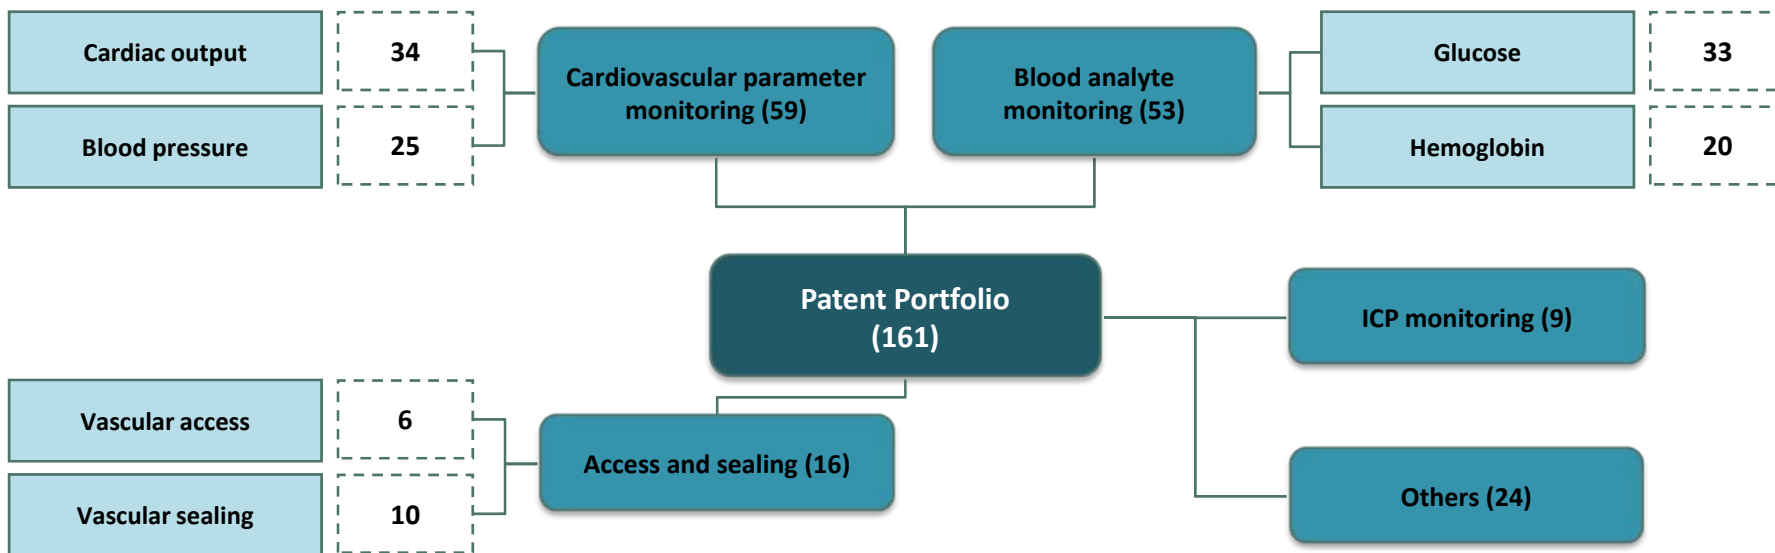

- Orbees medical categorized the patents based on various parameters such as application category, device category, legal status of the patent etc. and catalogued all the key attributes of a patent
- The patents were then broken down into patent families based on the common priorities and the relationship of patents with each other were drawn
- The patents were then analyzed based on application categories, device categories, patent types and application information

Outcomes

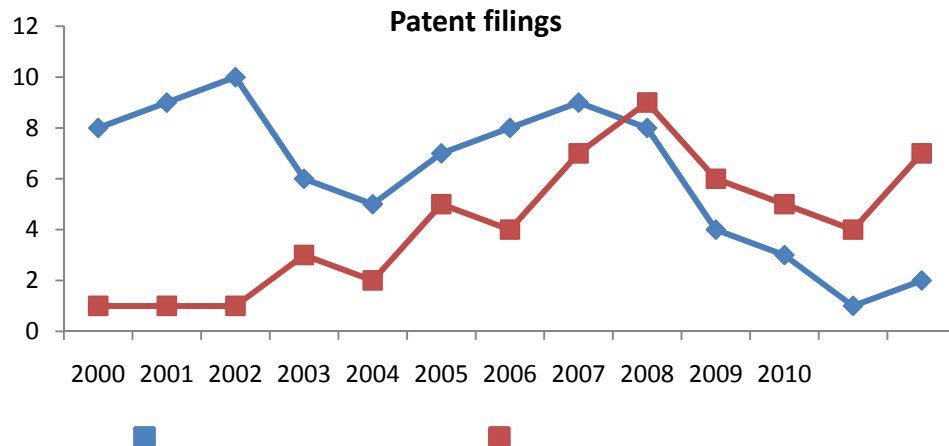

- All the important analyses alongwith the pertinent patents were uploaded on the IP dashboard developed by Orbees
- Our analyses provided a comprehensive picture of:
 - Strengths and weaknesses of the client's IP portfolio
 - Gaps in their technological coverage
 - Real-time commercial value of their IP assets
- This helped our clients strategize informed and calculated future R&D operations
